17. Andersen MK, Christiansen DH, Kirchhoff M, Pedersen-Bjergaard J. Duplication or amplification of 11q23, including the unrearranged MLL gene, is a recurrent abnormality in therapy-related MDS and AML, and is closely related to mutation of TP53 and to previous therapy with alkylating agents. Genes Chromosomes Cancer 2001; 31: 33-41.
26. Andersen MK, Pedersen-Bjergaard J. Increased frequency of dicentric chromosomes in therapy-related MDS and AML compared to de novo disease is significantly related to previous treatment with alkylating agents and suggests a specific susceptibility to chromosomes breakage at the centromere. Leukemia 2000; 14: 105-11.
